Building smarter markets.

A need for smarter markets.

Digital trading, high velocity and integration is greatly impacted by environmental, social and governance considerations.

Today, global demand for cleaner energy is greatly impacted by environmental, social and governance considerations.

The problem: lack of liquidity for emerging markets.

The problem: lack of standards in ESG-scoring and reporting.

The energy transition.

Net-zero emission agreements, China's Paris Agreement, and the true price of carbon emissions.

We need a marketplace for capital and vault of standards.

Abaxx is developing the commodity exchange for the energy transition.

Building regulated commodities products.

Futures contracts designed to bring liquidity to un-benchmarked new power capacity globally.

A regulated commodity-exchange solution to organize markets with more security.

Greater efficiency of the markets.

Capturing the energy transition.

A global consensus on transitioning away from coal and oil to gas and renewables.

Abaxx leverages deep expertise and video and data security and privacy.

Abaxx's executive team has over 300 cumulative years of experience.

CME, NYMEX executives bringing key relationships and experience.

Three trends are changing the economic and technological landscape.

Global exchanges are the largest allocators of liquidity into these markets.

Building smarter markets.

Net capital inflows increased by $180 billion in ESG equity funds.

The value of global assets applying ESG-investing towards their legacy systems and regulatory frameworks.

Trusted benchmarks for price discovery.

Developing faster than technology.

Digital trading, high velocity and integration command a changing global industry.

Abaxx recognizes the need for a need for smarter markets.

A lack of standardization in ESG-scoring and reporting.

An enormous opportunity to combine traditional exchanges can adapt with more security.

Greater efficiency of the markets.
